

BMH TECHNOLOGY – RENEWABLE FUTURE TOGETHER

BMH Technology is one of the global leaders in sustainable waste refining and solid biomass handling systems. The company's vision is to create solutions for waste to be reborn as raw materials and renewable energy. BMH Technology designs and delivers plants, equipment, and aftersales services worldwide to help customers recover materials, decrease landfill waste, and reduce CO₂ emissions. Our main segments are recycling and waste management companies, heat and power plants, pulp and paper mills, chemical production plants and cement plants.

Our values CO-OPERATION, PASSION and SUCCESS form the foundation for all our actions.

CO-OPERATION is essential for our work, and we want everyone to be involved, not only our personnel but also our customers, suppliers and other interest groups. Co-operation bases on mutual trust as well as on the appreciation of everybody's expertise, requirements and achievements. We value all opinions and encourage our personnel to participate in joint decision-making.

PASSION spurs us to make a difference on a global scale. Our commitment to reducing CO₂ emissions, cutting down the use of fossil fuels and solving global waste problems drives us to develop our equipment even further. We provide our customers innovative, competitive and sustainable solutions with a long lifetime.

We are committed to providing a safe and healthy work environment and we want that our staff members can also enjoy their leisure time. Together we improve our solutions, processes and management system to minimize risks and ensure better performance – pushing each other to excel!

SUCCESS is our target in everything we do. Together with our network, we create not only local, financial and technological success, but also sustainable global development. We want our success to benefit everyone around us.

Our success has a sustainable foundation. We are committed to responsible and ethical business practices in line with applicable legislation and internationally recognized sustainability principles, such as the UN Global Compact, and we value open communication with our stakeholders.

The implementation of this policy is supported by defined sustainability objectives and performance indicators and monitored through our management system. The policy is reviewed regularly to ensure suitability and effectiveness.
